INTELLIGENCE, OPERATIONALISED

AI that works for *your business*

Whether you know exactly what you want—or have no idea where to start—webuild it.

"Your AI. Your data. Your rules."

From SMBs to enterprises. Every sector. Every stage.

AI SOVEREIGNTY — OUR CORE PHILOSOPHY, NOT JUST A FEATURE

ZERO DATA EGRESS · ON-PREM · GDPR-READY

Why AI fails before it ships

01

THE DEMO TRAP

Prototypes aren't production systems.

Real businesses have messy data, legacy integrations, compliance requirements, and edge cases that no demo ever surfaces. Most AI vendors stop at the prototype. We start there.

We break the gap between "it works in the sandbox" and "it runs in your business" — with observable, tested, production-grade systems every time.

02

DATA SOVEREIGNTY GAP

Your data should never fund someone else's model.

Every cloud AI platform that processes your data is quietly building value off your intelligence. The default in enterprise AI is shared infrastructure — which means shared risk.

We architect AI that runs entirely inside your infrastructure, based on demand and use-case — on-prem, air-gapped, or private cloud. Zero data egress. Full sovereignty. This is our baseline, not an add-on.

03

THE INTEGRATION WALL

Bolting AI onto workflow creates fragile systems.

Organisations add AI on top of existing processes and call it transformation. The result: brittle automations that break under real load and create more complexity than they remove.

We rebuild the workflow around intelligence — agents, automation, and human oversight as one observable, production-grade operating layer. No fragile duct tape.

What we build — and what it does for your business

01

AI Strategy & Readiness Audit

We analyse your operations, find where AI will create real value, and hand you a clear priority roadmap — with ROI estimates — before any development starts.

02

Enterprise Knowledge Assistants (RAG)

AI that answers questions using your own documents, policies, and data — accurately, with source references, running entirely inside your own infrastructure.

03

Multi-Agent Orchestration

Multiple AI agents working together — each handling a specific task, handing off to the next, and completing complex workflows end-to-end without human intervention.

04

Autonomous Workflow Automation

Multi-step business processes that run themselves — with built-in error handling, retries, and alerts. Reliable enough for production, observable enough for compliance.

05

On-Prem & Private LLM Deployment

Powerful AI models running entirely within your own servers or private cloud. Your data never leaves your environment — meeting even the strictest data residency requirements.

06

Edge AI, Robotics & Multimodal

AI inference directly on hardware — drones, cameras, industrial sensors. Processes images, audio, and live data in the field with no cloud dependency.

Full-stack AI delivery — every layer of the stack

Clear stages. Visible outputs. No surprises.

Sectors we understand and serve

Fintech & Banking

Fraud detection agents · regulatory reporting automation · document intelligence · NL2SQL analytics

Healthcare

Clinical note summarisation · patient triage assistants · medical document RAG · HIPAA-aligned on-prem deployment

Logistics & Supply Chain

Predictive routing · IoT anomaly detection · autonomous dispatch · real-time shipment tracking systems · inventory management

Agriculture

Drone-based field inspection · plasma germination ROI analysis · crop health CV at the edge · yield forecasting pipelines

Retail & E-commerce

Personalisation engines · demand forecasting · AI customer support · inventory intelligence

SaaS & Product Cos

AI copilots · automated code review · test generation · incident triage · AI-native SDLC redesign

Professional Services

Knowledge assistants · meeting intelligence · contract analysis · procurement workflow automation

Government & Defence

Air-gapped LLM deployment · sovereign AI systems · classified data intelligence · edge inference platforms

Where we operate — and where we're going all-in

IntelEchoAI is headquartered in Chennai and Dubai, and we are targeting six regions .
Our highest-priority markets for new client acquisition are GCC, Europe, and the United States.

GCC — Gulf

HIGHEST PRIORITY

UAE Data Law · KSA Regulations

Dubai HQ gives us ground-level presence. Data sovereignty is a hard requirement across the Gulf — we engineer for it from day one. Active pipeline across government, finance, and enterprise sectors.

Government · Finance · Real Estate · Energy · Telecom · Retail

European Union

HIGHEST PRIORITY

GDPR — engineered, not checked

GDPR compliance is built into our architecture, not added at the end. On-prem and private cloud deployments for EU data residency. Targeting fintech, healthcare, and professional services.

Fintech · Healthcare · Professional Services · SaaS · Insurance

United States

AIMING

Enterprise-grade reliability & audit trails

US enterprise clients demand observability, audit logging, and clear SLAs as standard. We build for that. Strong fit with financial services, healthcare, and product companies.

Fintech · Healthcare · SaaS · Defence · Professional Services

HOME MARKET

India — Chennai HQ. Deep roots across enterprise, mid-market, and startup ecosystems. All deployments DPDPA-compliant.

NEXT TARGETS: Southeast Asia · Australia

Where we're building to — and the walls we're breaking

TODAY

Breaking the Demo Trap

- AI out of pilots and into production — for real
- Data-sovereign architecture as the default
- Multi-agent & autonomous workflow systems
- End-to-end delivery: strategy → live system

NEXT

Building the Governance Layer

- Agent Observability Platform — full transparency into decisions, cost & latency
- AITrism — AI risk, governance & regulatory compliance tooling
- Industry Agent Frameworks for finance, logistics, healthcare & construction
- Multimodal AI pipelines — voice, vision, and documents at enterprise scale

FUTURE

The AI Operating System

- Unified AI OS — models, agents, data & governance in one sovereign layer
- AI-Native Software Engineering — agents as first-class engineering team members
- World LLMs: Language models that don't just understand words—they understand how the world works
- Quantum + AI — next-generation compute infrastructure research

Three things we do differently

NOT ONLY ADVISORY. DELIVERY.

We ship. Others advise.

We build and deploy production systems. Every engagement ends with working software running inside your infrastructure. Not a slide deck, not a recommendation — a live system.

AI SOVEREIGNTY — BY DEFAULT

Your data stays yours. As you wish.

Air-gapped, on-prem, and private cloud deployments are our baseline — not a premium add-on. Full data residency. Zero egress. DPDPA · GDPR · UAE Data Law · ASD Essential Eight.

ALWAYS 6 MONTHS AHEAD OF THE MARKET

Global AI intelligence in your stack.

Our team across Chennai, Dubai, and Madrid monitors global AI research, emerging models, and frontier architectures — so every system we build is future-proof, not just current.

Engagement Tiers

*Starting from

Explore

\$249 – \$499

1–2 wks

Discovery session to find where we can infuse AI in your workflows if not known already

Pilot

\$599 – \$999

~2 wks

Live system on your real data based on discovery/discussion + full ROI preview

Deploy

\$3,500–\$5,000

4–5 wks

Production system rollout + integrations + 30-day support

Transform

\$8,000+

Basically, an Enterprise System

Full AI transformation - multi-agent systems, enterprise scale, and SLA-backed delivery

**Pricing may vary based on project timeline and complexity; final costs will be determined through discussion*

Let's build something that ships.

"Your AI. Your data. Your rules."

No demos. No lock-in. No wasted pilots. AI that runs in production — in your infrastructure, on your terms.
